PRODUCT NAME:

## AFS Walls Concrete

AFS walls (Architectural Framing System) is a polymer-based permanent formwork system for concrete walls. The extruded components slide together to create a concrete formwork, erected with maximum efficiency to achieve an attractive, low-maintenance wall.

Our 7mm aggregate formula is designed to maintain strengths at 180mm slump making the pour quick & easy.

### Things you should know

Typically used in 40MPa but also available in different strengths.

SPECIFICATION:

Vic Mix AFS Walls Concrete

ORDER CODE:

AFS

REVISION: 01/06/2021

The Concrete Supplier will not be responsible for the addition of water on site by non - authorised personnel, or in the case where the customer or his/her representative (ie. Pump Operator) has requested water to be added beyond the agreed parameters of the mix. Excessive use of water to achieve increases in slump may significantly affect the cohesiveness, pumpability, setting time, strength, permeability, shrinkage and durability of the concrete.
